Birding in Río Gallegos (Full day tour)

Río Gallegos, Santa Cruz, Argentina

Available anytime from October to March

Group size: 1-4

Tour category: bird photography

Trip overview

Río Gallegos is one of the southernmost cities of the South American Continent and it houses more than 120 species of birds. It is located at the confluence of the Río Gallegos and Chico rivers, in Santa Cruz Province, Argentina.

These rivers form a rich estuary where the tides condition biodiversity. Wide marshes are developed on its south coast covered with *Sarcocornia sp.* and *Suaeda spp.* Grassland and shrubs occupy the higher terrains.

Patagonian, Nearctic, and Antarctic birds can be found in this mosaic of environments and many of them entail a particular interest for both conservation and birding such as **Ruddy-headed Goose**, **Hooded Grebe**, **Magellanic Plover**, **Red Knot** and **Austral Canastero**.

Therefore, the entirety of Río Gallegos estuary is an **IBA** (BirdLife International) and it is also recognized as an **International Important Site** of the WHSRN.
